## TO SAFELY AND EASILY MANAGE
DOCUMENTS WITH LEGAL VALIDITY

SCENARIO

Digitalization is facing a period of significant regulatory and technological changes. On the one hand, the new eIDAS regulation defines common electronic identification procedures to ensure full interoperability between EU countries. On the other hand, remote digital signature technologies are creating new usage scenarios, offering services that allow users to sign documents from mobile devices without any need of physical devices such as smartcards or tokens. In this context we believe that, just as happened with electronic payments, the massive diffusion of electronic signature will take place after years of limited use. However, the technical configuration difficulties and the lack of a unique user experience for every signature technology generates a sense of frustration for users. On the contrary, it is necessary to ensure a simple and intuitive experience from the very first use of these technologies.

SOLUTION

Signing Today is Bit4id innovative service designed to ensure the full legal validity of digital documents. It is a versatile tool that, thanks to its identities portfolio, allows users to associate digital identites in their possession and of any Trusted Service Provider.

Signing Today is:

• Qualified by Design, which means that it integrates Trusted Service provider compliant with eIDAS

• A service that allows to sign digital documents with any device connected to internet and with any signature device (smartcard, token or remote signature)

• Easy to be integrated into any web site or mobile app, thanks to simple calls to an API

• Always in step with directives and technological standards and does not require updates

• "Pay as you go" rates to control expenses according to actual uses

Technical skills are not required,
users simply:
• Upload the document
• Select signatories and signature sequence
• Send the link to signatories
• Get the document signed

BENEFITS

Signing Today helps dematerialise the life cycle of documents with legally validity, from digital signature to archiving. Users can send documents to signatories and get them signed rapidly from any device connected to Internet, wherever they are, thanks to a single solution that ensures a simple and intuitive user experience.

In addition, using Full Managed Service, a single provider manages every aspect related to an IT service (backup, updates, help desk, disaster recovery, security, etc.), without any risk of unexpected costs.

Some benefits include:
• Less waste in paper and logistics costs reduction

• Documents stored in the cloud are always available

• Simple and intuitive management of documents life cycle

Thanks to Signing Today users can focus on their business while we take care of the legal validity of documental flows.
